

Avesta FinishOne™ Passivator 630

100% Stainless

An acid-free passivator!

Avesta FinishOne™ Passivator 630 passivate without nitric or citric acid. It helps to remove free iron from the surface and regenerate the protective layer in the stainless steel by speeding up the passivation process.

Standard applications

Avesta FinishOne™ Passivator 630 is intended for a wide range of industrial passivating applications. It offers a good general passivating result on stainless steel surfaces.

Features

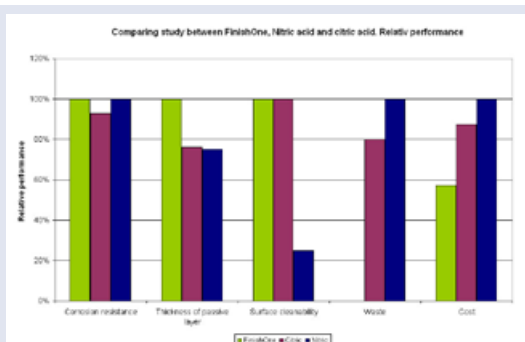

- Restores the passivation layer on stainless steel surfaces that have been damaged during fabrication such as grinding, brushing, blasting etc or usage.
- Improves the result after pickling by speeding up the passivation process.
- Diminishes the risk of discoloured surfaces caused by flash clouds or free iron (smut) when used wet-on-wet.
- Reduces the formation of toxic nitric fumes during rinsing after pickling.
- Prevents water staining caused by poor rinse water.
- Creates no hazardous waste and contains no nitric acid.
- Is easy to handle and classified as non-dangerous goods.

Surface restoration

Avesta Cleaner 401 can be used together with Avesta FinishOne™ Passivator 630, which helps regenerate the protective layer in the stainless steel by speeding up the thickness of the passive layer.

Avesta FinishOne™ Passivator 630 helps speeding up the thickness of the passive layer.

Instructions for use

1.1 To avoid smut formation after spray pickling, the passivator shall be applied before rinsing while the surface is still wet, "wet on wet". Leave the fluid to react 30 seconds.

1.2 To passivate after mechanical treatment, first pre-clean the surface using Avesta Cleaner 401, rinse with water, then

apply the passivator "wet on wet", and give it 3–5 min. to react.

1.3 To use for reduction of nitric fumes, when pickling, spray it on as a mist over the surface "wet on wet".

2. Apply the Passivator with a spray pump, e.g. Avesta Membrane Pump SP-25.

3. Working time. See 1.

4. Rinse thoroughly with water. There is no need to treat the waste water which is neutral and acid-free. If a complete residue free surface is needed make a final rinse with deionized water.

Packaging

Avesta FinishOne™ Passivator 630 is supplied in 2 kg, 25 kg and 1000 kg IBC polyethylene containers.

Storage

Avesta FinishOne™ Passivator 630 should be stored indoors at room temperature. Containers must be kept properly closed, in an upright position and inaccessible to unauthorised persons.

Keep the lid on at all times when not in use. Metals, alkaline, organic materials, heat and UV radiation will degrade the product. Store in a clean, cool and UV protected environment. Avoid contact with textiles.

Worker safety

Protective clothing. In general users should wear acid-resistant overalls, gloves and rubber boots. Face visor should be used and, if necessary, suitable respiratory protective devices.

Special conditions may apply from one country to another. Consult our website where updated Safety Data Sheets can be found.

Waste treatment

Empty containers (HDPE) must be cleaned and can then be recycled according to local regulations.
